Classic Marble Company (CMC), a trendsetter in the engineered stone industry has introduced a new range of high grade and high pressure compact laminates branded Exterior Clad Laminates (ECL) under Kalinga Slimtech.

Inspired by the colors and patterns in natural wood, the 6mm thick, full bodied laminates have been introduced in over 200 abstract and traditional designs to suit the taste of urban consumers.

This extensive range of new age laminates with grainy, bark style or plain wood patterns in befitting shades of natural wood will lend an amazing sense of modern design to an exterior wall. Combine plain and patterned wall coverings for a contemporary facade or mount matte finish laminates for antique, subtle appearance of an outer structure; the customized wall will effectively enhance the décor element of the exterior. Besides lending a visual treat to the outside area; the UV coating of the full bodied ECL will give an extra protection to the exterior of a building from harsh solar rays and extreme climatic conditions. This makes it an ideal application choice for balconies, gates and garage claddings, residential and commercial building facades including industrial places, fencings, signage, and partitions among others.

Processed under high pressure, the decorative laminates have a European UV film overlay that not only allows the product to withstand harsh weather conditions such as heavy rains, acid rains, hail storms and heat but also adds longevity. The product is strong, scratch resistant, easy to clean and maintain, chemical resistant, anti-soiling, and its colors do not fade with time. Being a light weight product it is easy to handle and install and also comes with a warranty of 10 years providing all major advantages to make it suitable for exterior installations.

Exterior Clad Laminates

Size: 2400mm x 1200mm (8ft. x 4ft.) 120" * 60"
