Kalingastone Launches 'Terra' For Walls

India's leading brand for engineered stones, KalingaStone launched their latest marble product - Terra under its existing Petra series. It has been developed especially to quench the present limitations in wall cladding applications. The application areas can range from interior wall cladding to covering huge exterior walls.

Terra has an earthy appearance, is smooth in texture with a

uniform grainy surface pattern throughout its surface and is seamless in installation. Depending on the taste of the occupant and the utility, the walls could adorn a host of relics to add a rustic aura to the space. Being an engineered marble, Terra does not break or chip easily, is scratch resistant and easy to clean. Terra is available in standard dimensions of 304 X 125 cm and thicknesses of 12 mm, 16mm and 18 mm. The large

format of the stone allows designer professionals to create unique artistic combinations of small and big stones and trendy geometrical designs.
